

Diabetes Management Pre-Procedure

Oral Hypoglycaemics (diabetes tablets)

Morning procedure

Do not take your diabetes medication the morning of the procedure.
Please bring your medication with you to your procedure.
You will be able to take your usual diabetes medication following the procedure when you resume a normal diet.

Afternoon Procedure

Please take your normal medication.
Remember, you may consume apple juice and Gatorade-type drinks while on your clear-liquid diet to maintain your “sugars”.

Insulin – dependent patients

For both morning and afternoon procedures

Day prior to your procedure:

- Take half the evening short acting insulin
- Take three-quarters of the evening Lantus insulin
- Take half the evening long acting insulin (if not using Lantus)

Day of procedure:

- Do not take your morning insulin

If you are unclear with these instructions, please contact Dr Walker's rooms on 5574 6133 or discuss with your GP or Diabetes Specialist.
